

OREGON RACEWAY PARK

UPDATE: JULY 2ND 2015

STAR PROJECTS EVENTS: ALTERNATIVE VEHICLE TECHNOLOGIES DAY.

The "World's Fastest Electric Car", The White Zombie, a sub 11 second conversion roasts the slicks on the Caspell Straight with the not so subtle application of a couple thousand amps.

Understated, elegant, well executed, and a blast to drive another Conversion Car. Stuttgart would be proud.

LEFT UPPER: At the end of the day a novel davit type loading arrangement for one of the Electrathon cars. Motive power is limited to 72 lbs of lead / acid battery in this endurance racing class.
LEFT CENTER: The massive lift off solar array rests on its stand as the team studies a glitch.
LEFT LOWER: A hard lesson learned for this all solar high school team: Bring all the tools, cables and programming with you.
